# URISA Invites Comments on the Geospatial Management Competency Model

**February 22, 2012 (Des Plaines, IL)** - URISA invites experienced geospatial professionals of all kinds – particularly those with management experience – to review and comment on a draft Geospatial Management Competency Model (GMCM). Reviews by GIS professionals, professional surveyors, photogrammetrists and remote sensing scientists, programmers and application developers who specialize in geospatial applications, educators with specialized expertise in Geographic Information Science and Technology, and others whose work relies on geospatial technologies and data analysis are all welcome to participate.

A URISA Task Force prepared the draft for the U.S. Department of Labor's Employment and Training Administration (DOLETA). Reviews will be reported to the Task Force and DOLETA, and will be used to refine and validate the GMCM. Reviewers who share contact information will also receive results of the public review as well as copies of the revised GMCM.

Links to the draft GMCM and an online questionnaire for reviewers are available at [http://www.urisa.org/gmcm\\_review](http://www.urisa.org/gmcm_review). The questionnaire will remain open through March 31, 2012.

The Geospatial Management Competency Model (GMCM) specifies 74 essential competencies and 17 competency areas that characterize the work of most successful managers in the geospatial industry.

The GMCM builds upon DOLETA's Geospatial Technology Competency Model, which specifies the foundational, industry-wide, and industry sector-specific expertise characteristic of the various occupations that comprise the geospatial industry (<http://www.careeronestop.org/CompetencyModel/pyramid.aspx?GEO=Y>).

URISA convened a task force composed of ten experienced geospatial managers and one facilitator at the 2011 GIS-Pro Conference in Indianapolis to produce the GMCM for the U.S. Department of Labor's Employment and Training Administration (DOLETA).

URISA's qualifications to organize the GMCM effort include its nearly 50-year history as one of the founding organizations of the GIS profession, its successful organization of the GIS Certification Institute and the URISA Leadership Academy, and its healthy working relationships with other professional and scientific associations in the geospatial field through the Coalition on Geospatial Organizations (COGO).
